PROFILE

Backend-focused Full-Stack Developer with 4+ years' professional experience shipping production software across fintech, trading, banking, and SaaS. Deep expertise in Java, Kotlin, and Spring Boot across monolithic and microservice architectures, with React experience enabling end-to-end ownership. Experience spans distributed systems, real-time data pipelines (RabbitMQ, Kafka, WebSockets), REST/GraphQL APIs, and cloud infrastructure (Azure, Docker). Designed, built, and operated a subscription SaaS solo, from system design through billing integration and production deployment.

PROFESSIONAL EXPERIENCE

Full-Stack Developer, Self-Employed • Sole architect and engineer of a production subscription SaaS: React 19 + Vite + Tailwind frontend (100+ components) on Supabase (PostgreSQL, Auth, Edge Functions, Google OAuth), backed by a 15-table schema across 52 versioned migrations. • Implemented per-user data isolation with 28 Row-Level Security policies and moved core invariants into the database layer: 16 Postgres triggers enforcing plan limits, default-data provisioning, and denormalised totals, alongside RPC functions for subscription state and trial lifecycle. • Built the full billing lifecycle on Paddle across 5+ Supabase Edge Functions: webhook handling with signature verification, entitlement checks, customer-portal provisioning, failed-payment recovery, and GDPR account deletion. • Developed the analytics surface (spending insights, monthly financial-health score, automatic recurring-transaction detection, net-worth tracking) with Recharts, plus full English/Albanian i18n and a prerender pipeline for SEO. • Ran a structured market-validation process before scaling further: 98 prospect conversations across four channels, 36 priced offers, 0 conversions. Concluded there was no willingness to pay in the target market and halted development rather than continuing to build. The product remains live.	12/2025 - Present Elbasan, Albania
Backend Software Engineer (Contractor), <i>ADUS Technologies s.r.o - xBrataI - AI-driven Alerts Platform</i> • Engineered the real-time signal-detection and alerting pipeline (RabbitMQ, WebSockets, PostgreSQL, MongoDB) that identifies multi-indicator confluences and delivers sub-second alerts to 10,000+ day traders across crypto, forex, and futures. • Launched 5+ revenue-critical features including Stripe subscription billing, community chat, and push notifications via OneSignal, enhancing user engagement and monetization. • Owned full feature lifecycle: requirements analysis → API modeling → testing → deployment • Delivered 70+ end-to-end tasks in 7 months while reducing post-deployment regressions by 40% through targeted integration test coverage.	04/2025 - 11/2025 Remote (Slovakia)
Backend Software Engineer (Contractor), <i>Noema Consulting - Enterprise Banking System</i> • Designed and evolved REST and GraphQL APIs in Kotlin and Spring Boot within a 240+ microservice enterprise banking platform, working in a 10+ person Agile team. • Strengthened access-control reliability across critical banking services by adding 50+ OpenFGA tests covering authorization roles, guarding the platform against authorization regressions in production. • Built event-driven integrations with Apache Kafka on Spring Boot 3, and modelled document persistence in MongoDB alongside the relational services. • Shipped 80+ tickets touching 10+ services inside that estate, tracing cross-service dependencies and coordinating releases with backend, frontend, and QA. • Earned the Microsoft Certified: Azure Developer Associate (AZ-204) certification during the engagement.	08/2024 - 03/2025 Remote (Qatar)
Backend Java Developer (Contractor), <i>Candidatis GmbH - JobAd Platform (Austria & Germany)</i> • Sole backend engineer for a job-advertisement platform serving Austria and Germany, owning REST/GraphQL integration with third-party services and mentoring a junior developer. • Cut the Spring Boot web crawler's runtime by 30%, materially improving the freshness of job-listing data across the platform.	05/2023 - 12/2023 Remote (Austria)
Java Developer, <i>Sabanet Albania - Alarm Management System</i> • Owned and extended a 10+ microservice alarm-management system (service discovery, API-gateway routing, centralized configuration) and added a Retrofit-based microservice for third-party API integration. • Modernized the platform by migrating 8+ microservices from Java 11 to Java 17 under SOLID principles, improving long-term maintainability and security posture	11/2022 - 05/2023 Remote (Durrës)
Java Full-Stack Developer, <i>Comdata Group</i> • Delivered full-stack features and the data-persistence layer (PostgreSQL, Hibernate, Spring Data JPA), progressing from junior to independently owning features end to end at a 90%+ on-time delivery rate.	07/2021 - 10/2022 Remote (Italy)

EDUCATION

MSc Computer Science, <i>University of Tirana</i>	2018 - 2020
8.1/10	
BSc Computer Science, <i>University of Tirana</i>	2015 - 2018
8.18/10	

TECHNICAL SKILLS

Languages Java, Kotlin, SQL, JavaScript (ES6+)	Frameworks Spring Boot, Spring Cloud, Spring Security, Spring Data JPA, Hibernate, React.js, Tailwind CSS	APIs & Integration REST, GraphQL, Stripe SDK, Paddle, OneSignal, Retrofit, Feign Client, OAuth 2.0, JWT, Webhooks	Databases PostgreSQL, MongoDB, Supabase, SQL Server, PL/pgSQL, Row-Level Security, Database triggers & RPC
Messaging RabbitMQ, Kafka, WebSocket/STOMP	Cloud & DevOps Azure, Docker, Kubernetes, Docker Compose, Git, Netlify	Architecture Microservices, Event-Driven Systems, Distributed Systems, Monolith	Product Customer discovery, market validation, pricing strategy, SEO fundamentals (prerendering, structured metadata)
Testing JUnit, Mockito, Integration Testing			

CERTIFICATION

- Microsoft Certified: Azure Developer Associate (AZ-204)

LANGUAGES

English Proficient	Italian Conversational	German Basic A1/A2
